From: Commandant
To: Commanding Officer, USCG Loran Transmitting Station, Jupiter, Florida
Via: Commander, Seventh Coast Guard District (c)

Subj: OCD Alarm Generator; installation of

1. Recently the subject equipment was developed and tested with AR/IMLS-41 and AR/IMLS-42 equipment at Electronics Engineering Station, Wildwood, New Jersey, as a means of providing a Civil Defense Alarm by means of Loran-C. The test indicated the technique not only feasible but highly successful. It is presently planned in the month of October 1964 to perform additional tests and evaluation, this time, to an operational Loran-C chain.

2. It is requested that the subject equipment be installed in your station in accordance with Appendix A, OCD Alarm Generator for the Loran-C Civil Defense Warning System, Section 2, which was mailed to your station 27 July 1964 by HQ, Wildwood.

3. Installation should be made on a "not-to-interfere" basis. Completion of installation by 30 September 1964 is desirable.

4. Detailed plans of test dates and transmission times will be provided at a later date.
